

View Real-Time Production Reports

Introducing Process Control

Our new Process Control module **displays data in real time** on tablets on your production floor. **Your staff sees what needs to be mixed, baked, or packed.** After completing a certain process, your crew members will mark what was done on the touchscreen tablet so the next person can start immediately and only see the unfinished tasks in the area assigned. **As more orders are entered, the information displayed updates to the newest totals.**

With Process Control you will reduce the amount of paper used in printing production reports, **secure your sensitive production data**, and ensure that orders are precisely filled.

TwinPeaks currently offers three types of reports in Process Control: mixing, baking, and packing. Mixing information displays the total doughs needed and the mix sizes and instructions. Baking shows the total finished units required for production. Packing shows which customers receive which finished goods.

To learn more or see a live demo, please call our office at 626-793-7223. We look forward to showing how Process Control can help you!
